## Edmh, LLC

Edmh (Electronic documentation for mental health) has developed a comprehensive software package named **System-Q** for complete electronic health records (EHR) serving mental health clinics and professionals

Edmh, LLC offers a free 30-day trial version, which may be downloaded from [www.System-Q.com](http://www.System-Q.com). Technical support, updates, and enhancements are provided with an annual support service plan.

## Description

System-Q is an electronic health record (EHR) system designed specifically for outpatient mental health services. It provides comprehensive management of electronic client health records. It is a windows-based program with multiple levels of security that operates from a home/office computer or server. Some system settings may be modified to accommodate specific clinical or business needs, operational workflow or clinician work style.

## Quality Assurance

Professional/clinical competence is ensured with the standardized clinical forms (created by MTM Services for the MSDP project) which meet Federal regulations and requirements. The forms assist clinical formulation, planning, treatment, outcome measurement, quality assurance, and prove the 'medical necessity' of treatment.

This organized system uses standardized clinical forms and maintains current, accurate, and complete information. It achieves high quality clinical content and provides an effective means to describe the 'medical necessity' of treatment, ensuring audit proof client health records.

System-Q promotes "great clinical and business practices".

## Simplicity

- One Main Screen
- One document at a time
- No unnecessary screen changes
- No complicated menu navigation

## Ease

- Only clients and documents assigned to a clinician are visible by that clinician
- The Main Screen has your “Queue” - a To-Do list of documents to be completed
- Documents are automatically generated and added to the correct User’s Queue
- Completed documents are automatically removed from the Queue and stored in the client’s record. They may be viewed but never changed.

## Completeness

- Required data is always verified
- An industry standard workflow is followed for routing and processing documents
- The system maintains the “Golden Thread”

## Business Benefits

- Prevent lost revenue from unbilled services
- Consistent assessment, planning & service documentation
- Compliant with Federal Mandate for Electronic Health Records by 2014 and a wide variety of regulatory and payer requirements

## Features

- Standardize Clinical Forms created by MTM Services and released by the Massachusetts Standardized Documentation Project (MSDP)
- Automatic generation and routing of clinical forms
- “To Do” list of all incomplete documents always visible
- Follows an industry standard process workflow that maintains the “Golden Thread”
- Internal Messaging System
- Scans external documents to client’s file
- Protection against Insurance Audits
- Multiple levels of Security
- Runs on any Windows-based laptop, desktop or server

## Program Packages

### Private Practice version

A low-priced version designed for a private practice Therapist or Psychiatrist.

### Agency version

We offer several tiers based on the number of users your agency will have. All are priced very competitively.

Both versions of System-Q can pay for itself in 6-12 months by stopping lost revenue and increasing productivity. Beyond the initial purchase price, there are no per user or monthly usage fees! There is only an annual maintenance agreement fee that provides technical support and system updates.

## Data and Security

- Data stored on your computers. No internet access required
- Unique login for every user
- Highly secure and trusted data storage solution
